Amendment to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A method of presenting data from an application executing at a computing device at a ~~remote~~ wireless device[,] remote from said computing device, said method comprising:

receiving at said wireless device, a representation of a text file defining:

a format of a user interface for ~~the~~ said application at said wireless device;

a format of network messages for exchange of data generated by said application;

a format for storing data related to said application at said wireless device;

receiving data from said application in accordance with said format of network ~~transactions~~messages, and presenting said data at said wireless device using said user interface.

Claim 2 (currently amended): The method of claim 1, wherein said text file is received at said wireless device and wherein said text file is an XML file.

Claim 3 (currently amended): The method of claim 1, wherein said text file is parsed, and a representation of said text file is stored at said wireless device.

A5

Claim 4 (original): The method of claim 1, further comprising storing data generated by said application at said wireless device using said format for storing data.

Claim 5 (original): The method of claim 1, wherein said text file defines screens; events arising in response to interaction with said screens, and actions for processing said events.

Claim 6 (currently amended): The method of claim 1, wherein said format of network messages comprises XML definitions for said network messages, and wherein data for said application are dispatched from said ~~mobile~~ wireless device using said XML definitions.

Claim 7 (currently amended): A wireless mobile device comprising:

a processor;

computer readable memory in communication with said processor, storing virtual machine software controlling operation of said wireless mobile device, said virtual machine software comprising:

a parser for receiving a text file;

a screen generation engine, for presenting at least one screen at said wireless mobile device in accordance with said text file;

an event handler for processing events arising in response to interaction with said at least one screen in accordance with said text file;

object classes corresponding to actions to be taken by said in response to interaction with said at least one screen.

A5

Claim 8 (original): The wireless mobile device of claim 7, wherein said memory further stores a representation of said text file.

Claim 9 (original): The wireless mobile device of claim 8, wherein said representation of said text file is created by said parser.

Claim 10 (original): The wireless mobile device of claim 9, wherein said parser comprises an XML parser.

Claim 11 (currently amended): The wireless mobile device of claim 10, wherein said object classes corresponding to action to be taken comprise object classes that present screen elements at said wireless mobile device.
